

KTC Series Turbine Flushing Oil

【Introduction】

KTC series turbine flushing oil is blended with deep refined paraffinic base oil, and added well selected functional additive. The oil is applied in new turbine and flushing procedure after overhaul. It has good miscibility with most of turbine oils

【Application】

KTC-I turbine flushing oil, blended with deep refined group I base oil, is a specialized flushing oil for anti-oxidation and anti-corrosive turbine oil, anti-ammonia turbine oil and “KunLun” KPT series turbine oil. KTC-II special turbine flushing oil, blended with high grade base oil manufactured by Chevron ISO-Dewax technology, is a specialized flushing oil for long life “KunLun” KTL series turbine oils and KTG series combustion gas turbine oils.

【Characteristics】

- Excellent oxidation stability: KTC series special turbine flushing oil has outstanding oxidation stability, and flushing would not affect the oxidation property of the turbine oil used.
- Good air releasing performance, extremely low foaming tendency: KTC series special turbine flushing oil is produced with extremely deep refined base oils, ensures that after flushing no adverse effect to air releasing ability and foaming tendency of oils in use will occur.
- Outstanding miscibility: KTC series special turbine flushing oil has extremely good miscibility with “KunLun” series turbine oils, which ensures the safety and normal performance of equipment after flushing.

【Specification】

Meets the provisional specification of KTC series special turbine flushing oil.

【Storage and Handling】

- Store indoor or under covering. When stored outside, should lean to prevent entering of rain. Protect drum from rust, and keep away from strong light and severe cold weather. The storage temperature should be below 60℃.
- Before application, miscible test must be done with the using oil in equipment.
- After flushing, drain out the flushing oil as possible, in order to prevent impurities left in the unit.
- KTC-II special flushing oil is definitely specialized for “KunLun” series long life turbine oil and KTG series combustion gas turbine oil, could not be substituted by other oils.

【Special Preference】

Our company would reclaim the KTC series turbine flushing oil with discount on demand of customers.
